

Teak & Wood Finishes

ARMADA™ MARINE TEAK & CLEAR FINISHES

Armada is a long-lasting, durable coating that beautifies and protects expensive hard woods from the harsh elements of the marine environment. When applied, the oil alkyd resin based formula penetrates the surface of the wood sealing and protecting it. Subsequent coats bond with the first, building-up to a semi-hard varnish like coating. Because this coating is microporous and relatively flexible, it allows the wood to breathe and flex without causing the coating to crack or peel. Armadas finished color is similar to varnish, in both the gloss and the satin version; because the product is translucent, the finished color is dependent on the original color of the wood.
