

CARE & MAINTENANCE GUIDE

FOR ACRYTHANE XSC TOPCOAT

1. Introduction

Now that you have your boat painted with HMG Acrythane XSC Topcoat it is time to take care of that finish so it will stand up to the demanding marine environment for years to come. Follow this Care & Maintenance Guide to keep your boat looking great for years to come.

2. Washing

Keeping your boat free from dirt, grime and marine scum will help protect it from the harsh impact of the sun and the sea. It will also add years of life to its finish. The key to taking the chore out of washing is to wash and detail the boat thoroughly once a year, wash and wax it regularly in season and to rinse it with fresh water after each use. To eliminate water spots fry the boat down with a chamois.

3. Protecting

It has been our experience that nothing, absolutely nothing half so much insures the beauty and longevity of your boat than the continual maintenance of a good coat of wax. Yearly compounding will keep your boat looking good for years. Periodic polishing with a fine compound will remove the oxidation. Applying and maintaining a good coat of wax will prevent deterioration.
