

SuperSpeed SP52 is a revolutionary marine anti-foul, using technology to mimic the skin of a fish. A highly, slippery microfilm develops when the paint is in the water for 8 hours. The film sheds any marine growth as the vessel moves through the water leaving the hull clean and efficient.

Although no claims are made, enhanced performance and or fuel savings have been achieved by many users. Both power and sailboat users have experienced improved speed/performance and SP52 is not the first choice of many competitive sailors and fishermen alike.

SuperSpeed SP52 also retains its properties when the boat is repeatedly removed from water for storage or transportation.

Easy to Use

Exceptional Physical Performance

Potential Speed Enhancement
