

For over 70 years HMG has manufactured high performance paints and coatings for some of the most demanding customers. Companies like Rolls Royce and Euro Disney and places like Buckingham Palace and the Smithsonian Institute have all called on HMG when they need a special product.

It is only natural that HMG would feel at home in the demanding environment of the marine industry. Boat builders and boat owners are long accustomed to expect only the best when it comes to the materials they use in the unforgiving environment of the seas. But we must admit, we do not always adopt a “conventional” approach when it comes to tackling problems, some of which are as old as man’s affair with the sea.

Our Anti-Foul draws on the lessons of millions of years of aquatic evolution to produce a unique solution to bottom fouling. Our Microshield turns conventional wisdom on its head with an ultra thin, ultra high performance coating. The list goes on...

Product Overview:

HMG Acrythane XSC Topcoat

Acrythane XSC is a two-part Acrylic Urethane topcoat. Long lasting, very high gloss and outstanding durability are combined with highly applicator friendly characteristics. Acrythane applies easily with spray or brush, requires fewer coats due to its high solids content and is completely repairable.

Polykote AMC Primer Surfacer

A finish primer that can be used anytime that the substrate is in good condition and provides an excellent “key” for the Acrythane XSC topcoat. It’s high resin content means that the topcoat can be applied at anytime, without the necessity to sand prior to applying the finish coats.

Polykote MPS 4 + 1 Primer Filler

A particularly easy to sand primer filler that can be overcoated wet-on-wet or can be left to dry and sand prior to use of Acrythane XSC topcoat. MPS 4+1 fills scratches and minor imperfections and eliminates sinkage of the following coats.

Epi-Prime Epoxy Primer

A traditional two-part epoxy primer that can be used above or below the waterline. It provides an excellent barrier coat prior to using SuperSpeed SP52 Anti-Foul.

Etch Primer

Provides an ideal protective coating to aluminum and its alloys and is ideal for overcoating with other primers except those which are epoxy based.

But HMG thinks there is something else, something equally as important...the people backing up the paint. At HMG we only make paint and we make it not just to delight our customers but also for a job excellently performed.

It is very important to us at HMG not only do our customers have the best materials to work with, but also they are as straightforward as possible to use. Acrythane XSC fulfills these requirements easily and well. It is a two-part high solids Acrylic Urethane with excellent opacity, even in one coat it will cover extremely well, it gives a very high gloss finish and is simple to use.

Coma Berenice is an outstanding, long lasting bright work varnish. Its deep, rich, high gloss finish is achieved without the need for complex mixing or multiple coats allowing even first time varnishers to achieve the highest possible standards of appearance on their bright work. Typically varnishes age and crack because they lose their flexibility. Coma Berenice is unique in its ability to maintain flexibility and even after extended periods in the sun and rain, it continues to adapt to the wood's expansion and contraction. Result – Coma Berenice offers high build, ultra high gloss, ultraviolet resistance and color stability like no other comparable product in the industry and a longevity of product life rivaled by none.
