

**Fumed Colloidal Silica (formerly known as CAB-0-SIL)**

For use when an extremely hard solid with high density is needed, i.e. structural bonding, filling and filleting.

**Milled Fibers (1/32" milled fiberglass)**

For use when epoxy must fill a void and provide extremely high strength and resistance to cracking (i.e. structural filleting, bonding of hardware, and keel bedding).

**Phenolic Micro Balloons (organic phenolic hollow spheres)**

For use when low density, light weight sandable paint-ready surfaces are required, i.e. when fairing.

**Wood Flour**

For use when a hard solid for filling and filleting is required.

**Epoxy colorant**

Available in an epoxy suspension for better dispersion: white black, blue and green.
