

Standex Univers® and Acquire RX Color Matching System. Make color identification fast and easy.

Acquire RX is a portable, computerized color matching system that views and reads the actual car color and transmits the reading into the Standox Univers® computerized color retrieval system. This unbeatable combination helps make color identification work fast and easy.

Simply place the Acquire RX directly on a polished section of the car body. The integrated measuring head will "read" the color shade from three-different angles, which ensures highly accurate results.

The reading taken from the car body is then compared against the formulas in the Univers color retrieval system and calculates the exact formula needed to create a blendable match.

Features and Benefits

- The portable Acquire RX uses AA batteries, so battery replacement is easy and it can be used anywhere.
- It's easy to use - just press the Acquire RX against the polished finish and press a button to take a reading.
- The advanced fiber optics in the Acquire RX looks right into the color characteristics of the paint, ensuring that it's not tricked by different lighting, the way the human eye can be.
- A large memory and storage capabilities enables the Acquire RX to hold up to 999 readings in memory before downloading into the Univers system.
