

# Standex® 2K HS System Filler.

## A powerful filler that holds perfectly.

### The chromate-free Standox 2K HS System Filler provides excellent vertical hold-out and good filling properties.

In combination with the right hardener, the filler becomes part of a professional doubles team. This high build filler is mixed with the existing Standox 2K Hardeners. This pays dividends. There is no chance of confusion or mistakes.

The universal 2K HS System Filler can be applied with total ease at any shop temperature and on virtually any substrate. This powerful filler has excellent vertical hold-out over primed and sanded repair panels, through-hardened sanded paintwork, sanded solvent resistant OEM primers or sanded Standox polyesters.

### Features and Benefits

- **Outstanding product properties.** This filler is incredibly stable, dries quickly and hardens optimally, so you can then continue with a wet or dry sanding.
- **Available in light gray** to achieve the best coverage of the top coat.
- **Mix with Standox 2K Hardeners.** Easily mixed 4:1 with any 2K Hardener from 05-15, which is ideal for cold temperatures, to 30-45, which is ideally suited for hot temperatures.
- **Easy-to-sand.** Due to excellent flow, this easy-to-sand filler reduces the amount of sanding necessary.
- **High-solids content.** Requires no additional reducer in most cases, thereby enabling economical and environmentally friendly application.
